

ACCUDATA SYSTEMS **CISCO SYSTEMS SPECIALIZATIONS**

Accudata Systems, Inc. has achieved two specializations from Cisco Systems –

- The Cisco Wireless LAN Specialization
- The Cisco IP Communications Specialization

Accudata Systems is proud to be able to offer its clients the benefits that these specializations signify – the advanced training, specialized knowledge, and in-depth experience necessary to deliver Cisco wireless and IP communications products and services to the mid and enterprise markets.

Cisco specializations help to assure clients that Accudata Systems brings superior product knowledge and delivers outstanding and consistent technical support to its client engagements, and that the company enjoys a close relationship with Cisco.

The Cisco specialization program signifies:

- Technical recognition for specific technical capabilities in the IT industry
- Greater access to Cisco technical resources, such as the Cisco Virtual Lab and other technical expertise
- Individual career enhancement within Accudata Systems, increasing the skills and expertise available to its clients
- Greater access to Cisco products, solutions, and technical support

The Cisco Wireless LAN Specialization

Signifies proven experience with site design, deployment of wireless access points, operating a wireless infrastructure, and building and maintaining an end-to-end wireless network

The Cisco IP Communications Specialization

Signifies proven experience in deploying and supporting highly scalable, reliable, and available distributed multi-service IP communications solutions that are based on a converged architecture in a single office, a remote site, or an entire enterprise

As a result of achieving these Cisco specializations, Accudata Systems can offer its customers:

- The assurance of recognized, specialized expertise with Cisco products and solutions
- The strength of a close association with Cisco and access to its knowledge base and technical resources
