

ACCUDATA SYSTEMSSM **NETWORK HEALTH CHECKS**

OVERVIEW

One of the most critical and challenging aspects of today's networked computing environments is ensuring that all network services are functioning optimally so that all resources are readily **available** and are **performing** as expected.

Many times when problems occur, the symptoms are treated quickly so that services are restored as soon as possible. However, the underlying cause of the problem can still be lingering somewhere, waiting to re-surface again at the most inopportune time.

Accudata Systems has developed a series of **Network Health Checks** to help its clients proactively examine the health of various network resources and implement corrective measures.

Accudata Systems' Network Health Checks provide tangible and immediate value:

- Objective, outside experts will provide a "fresh" view of your network
- Uncover the causes of lingering problems
- Anticipate future problems
- Help avoid network disaster
- Realize the benefit of our experience in a multitude of environments

Network Health Checks are designed to be brief, concise, and recurring if necessary to pinpoint specific issues and recommend immediate solutions.

- Normally two to five days in length
- Focused on a specific network resource
- Recurring as necessary to ensure continued network health
- Immediate corrective measures taken, results and recommendations documented

Network Health Check Examples / Solutions / Offerings

Here are just a few of the **Network Health Checks** that Accudata Systems can perform:

Network Infrastructure

Microsoft® Active Directory®
Microsoft® Exchange
Data Backup and Protection
Citrix Environment

Security

Firewall Rules
Firewall Log Processing
Wireless Access Points
Security Patch Levels
Intrusion Detection System
